[FOR IMMEDIATE RELEASE]

CSB News USA Restores Service After Temporary Cyber Attack

IT Teams Contain Threat as Company Apologizes for Service Interruption and Implements New Safeguards.

Dhaka, Bangladesh – 11.12.25

CSB News USA confirmed today that its website and digital media were briefly hit by a cyberattack during a major news broadcast earlier this week. The effect was that for hours visitors saw a 404 page on the site and live reporting services were disrupted. The firm's IT team managed to control the attack and services are now back online. The firm said that no sensitive information or user data was breached in the hack.

The disruption led to confusion and frustration among the audience, and spawned unverified rumors on social media that there had been a data breach. CSB News USA responded swiftly to the alarm raised by people by updating its social media promptly and engineers were busy ensuring the affected systems were secured. The editorial and reporting team also worked round the clock by covering the breaking story through other channels such as partner stations and media broadcasts to allow the audiences access the correct information.

After the attack, CSB News USA has undergone complete technical inspections and made instant improvements to their cybersecurity status. Some of the measures taken are more monitoring and intrusion detection tools, increased access controls, faster patches to major systems and staff security training. The company has additionally contracted an external cybersecurity company to have a detailed forensic analysis of their platforms and recommendations put forward to further harden their platforms.

CSB News USA will ensure that it is transparent and will make any new finding available to the public as it becomes available. The organization urges the viewers and subscribers to get official updates through official CSB News USA channels and not to spread unconfirmed statements on social media.

About CSB News USA:

CSB News USA is an international news company that provides 24/7 service on breaking news, politics, business and culture news on broadcast and online platforms.
