Department of media studies and journalism, ULAB

Team Member List and Role

Name and ID	Role
1. Al Eakram Mahmud Shoumik – 223012003	Un Agencies – Media & Public Relation Officer
2. Maliha Tasnim - 223012079	INGO’S -Communication Specialist
3. Md.Safwan Hossain- 223012007	Government & Public Sector – Public Relation Officer
4. Fariha Rahman Pushpo- 223012002	Corporate Sector- Advocacy & Communication Specialist
5. Romysha Mahonaj Oishy- 223012083	Academic Sector- Research Communication Associate

Executive Summary

Why We Are Committed to This Topic: As the Media and Public Relations Officer in the UN Agencies in Bangladesh it was a fatal understanding that despite having access to technology; connection is not empowerment. Digital infrastructure (e.g., Digital Bangladesh and Smart Bangladesh) has come in leaps and bounds in Bangladesh, but an enormous gap still exists.

The problem of digital illiteracy, especially in the rural communities, is not only a technical challenge, but also a developmental challenge that will impact all other UN mandates.

Misinformation is a Problem: It seems like fake news and gossip hit people in rural areas the hardest. This can cause trouble in communities or health crises, like we saw during COVID-19.

The Economy Hurts: People in the country don't always know how to use the internet. So, they can't get things like online services, sell their crops online, or find jobs that aren't nearby. This only makes the money gap between cities and rural areas bigger.

Civic Disengagement: Low media literacy denies the marginalized groups the ability to be in a position to act in governance, have their rights and hold systems to account.

Thus, this is not just our educational interest but it lies in the basis of the successful accomplishment of the Sustainable Development Goals (SDGs) and especially in Quality Education (SDG 4) and Reduced Inequalities (SDG 10). We consider MDIL the 21st Century literacy a requirement that rural citizens must be able to survive and succeed in a digital economy.

Why We Collaborated with Other Partners: The digital chops gap in pastoral Bangladesh is much too great for any of us to address on our own, so we partnered. We used a cooperative strategy that engages several sectors in order to truly make a change that lasts and reaches everyone.

Government & Public Sector: We banded with government agencies similar as the Ministry of Education and the ICT Division. This assured that our enterprise rounded significant public programs similar as Smart Bangladesh 2041. Their involvement guarantees the relinquishment and expansion of successful airman enterprise throughout the nation.

INGOs (International Non-Governmental Organizations): The collaboration with INGOs allows us access to the far-flung communities at the level of on the ground access where we cannot be trusted without meeting them directly. Their current networks enable training modules to be deployed quickly.

Corporate Sector: The infrastructure is an input of the private sector. We are also going to use the technical capabilities, devices, and internet connectivity solutions of the telecommunications companies and technology firms to reduce the barrier to entry by rural users.

Academic Sector: Our knowledge partners are universities and research institutes. They facilitate the empirical rigor required to quantify impact, create localized curricula that does not ignore rural cultural settings and make our interventions evidence based. This coalition merges policy authority, grassroots reach, technical power and academic rigor to make MDIL more of a practice-based tool to empower the rural population rather than a conceptual one.

Context

Background to the Social Problem

The exigency of this project is based on the Bangladeshi demographical fact. Since around 59 percent of the population lives in rural regions, the national development cannot be discussed without referring to the development of the villages. Although Bangladesh has impressively progressed in digitization, in these communities, there exists a major dual divide one of access, one of literacy.

The Access and Literacy Gap Foundational literacy is one of the major obstacles. The illiteracy level is around 25 percent and even the adult literacy levels are around 75-76; however, the same levels are much lower in the underdeveloped rural areas. In the absence of basic education, the transition to the digital literate will be increased exponentially. Although the government has digitized a big proportion of the services, a significant population in the rural setting does not have the background knowledge to access the digitalized services.

Internet Disparity: As of 2023, 57.3 percent of urban residents had access to the internet compared to 42.1 percent of rural residents.

The Skills Deficit: Of access not ability. According to this BRAC study of 2019, 77 percent of rural households were not equipped with the digital skills needed to prepare them to enter the digital age.

The Effect: The Pretence to Misinformation The worst symptom of such low literacy is the so-called misinformation trap. As smartphones continue to proliferate across the countryside, citizens are not always critical thinkers since they passively consume social media without realizing it.

Failure to Check: A survey funded by UNICEF revealed that only a quarter of the adults had obtained a high score in news literacy and the rest had scored low.

Practical Implications: Since most rural users are unable to distinguish between authentic news and fake news, social media has emerged as an instrument of propaganda and rumours. This media illiteracy also makes them inaccessible to basic services, both electronic banking and government portals, as well as more crucial weather predictions and health guidance, just because they do not have confidence or knowledge of the digital platforms that provide them.

Scope and Limitations of the Project

Project Scope (What We Will Cover): This program will address the soft skills gap, which can only be repaired through infrastructure. Our intervention focuses on:

Behavioural Change: Reducing rural users to active and critical engagement (e.g., the Fact-Check Before You Trust approach).

Community-Led Education: Using the current networks, such as Union Digital Centers (UDCs), local schools, and local leaders to provide training.

Problem Definition & Campaign Purpose

Clear Problem Statement

Even with the high rates of mobile adoption, rural Bangladesh, with only 77 percent of households having the required digital skills, is both vulnerable to misinformation and scams and not benefiting from the required e-services, a situation that contributes to the establishment of the digital divide to a bigger socio-economic disparity.

Main Objective of the Campaign.

Main Intention Behaviour Change and Capacity Building. Awareness is one aspect but the essence is to ensure that the rural citizens cease being passive customers of technology (and they become susceptible to technology usage) and become active, critical and safe consumers. The campaign aims at changing the habits, namely, to change a user mindset of trusting everything on the screen to mindset of verify before sharing, but at the same time develop the relevant practical skills on how to manoeuvre within the Smart Bangladesh ecosystem.

SMART Objectives

To make the 50 Lakh BDT budget effective within the period of the one year, we have set the following SMART (Specific, Measurable, Achievable, Relevant, Time-bound) objectives:

The Goal under Critical Awareness:

Objective 1: Critical Awareness & Reach

Specific: Multi-channel awareness campaign (Community Radio, Miking, IVR) on the risks of misinformation and digital hygiene.

Measurable: Engage at least 500,000 rural people in the six targeted low-literacy Unions and reach a 30 percent improvement in the ability of the target audience to recognize fake news or attempts to be scammed by the endline survey measure.

Achievable: possible using low-cost high reach media such as community radio and traditional miking (budgeted at 20% of funds).

Relevant: Strictly speaking, relates directly to the fact that 76 percent of adults today are low when it comes to news literacy.

Time-bound: To be done by Month 12 of the campaign.

Objective 2: Functional Skill Acquisition

Specific: Direct skills training through the use of Digital Maa Circles to women and UDC Discovery days to farmers.

Measurable: Educate 1,500 Digital Champions (targeting women and youth) who will report a substantial change (40%+) in confidence in utilizing at least two types of fundamental digital services (e.g. mobile banking, birth registration or agricultural pricing apps).

Budget: The “Train the Trainer” model will also enable us to scale this with the 1.8 million BDT training budget.

Relevant: Addresses the 30% gender disparity and farmers not having access to digital markets.

Time-bound: By Month 10, training cycles must be done so that there is a 2 months post-training support/monitoring.

Objective 3: Institutional Sustainability

Specific: Incorporate digital literacy units in the pre-existing community frameworks through training local intermediaries.

Measurable: Prepared 100 local intermediaries (School teachers, UDC entrepreneurs, and Imams) with the toolkit of the Digital Ambassador, and Pedagogical resources.

Achievable: With the help of the Ministry of Education and Islamic Foundation ties, the costs of operation are reduced.

Relevant: Reduces the sustainability risk noted in the context analysis (users going back to old habits after the campaign is over).

Time-bound: Toolkits handed over and training finished by Month 6.

Environmental Scanning

PESTLE Analysis

This macro-environment survey is an evaluation of external forces that influence the application of the campaign in rural Bangladesh.

Political:

- **Fit with Vision of Government of Bangladesh:** The campaign is in compliance with the vision of Smart Bangladesh 2041 of Government of Bangladesh, and with the program a2i (Aspire to Innovate), that is, the campaign has a high-level political buy-in.
- **Governance Structure:** The dependence on Union Parishads and local structures of governance offers the project a valid access into the villages but opens to the risks of bureaucracy and local politics.

Economic:

- **Resource Constraints:** Rural poverty is still present; the cost of data is dropping, but the marginalized population (farmers/marginalized women) has a low purchasing power to buy smartphones and high-speed data packages.
- **Financial Inclusion Opportunity:** Mobile Financial Services (MFS) such as bKash has expanded very fast, which is a great economic reason that people should acquire digital skills to avoid fraud and open up markets.

Social:

- **Demographic Dividend vs. Divide:** Bangladesh has an enormous young demographic (15-30 years) who is waiting to embrace technology, but a huge segment of the rural adult population (25% illiterate) is psychologically profoundly rooted in a digital antipathy.
- **Gender Dynamics:** Patriarchal traditions of rural regions do not allow women to gain access to mobile devices on their own. Male relatives are the ones who tend to be the gatekeepers and access of women becomes hard without the consent of the community.

Technological:

- **Infrastructure Gaps:** Mobile network coverage (4G) is very extensive, but it is inconsistent in quality and stability in remote villages. The lack of power and high-speed internet can be a barrier to successful training via applications.
- **Limitations of the devices:** Feature phones (button phones) continue to be used by a great percentage of the rural population, and so low-tech options such as IVR and SMS should be used in conjunction with smartphone training.

Legal:

- **Cyber Security Landscape:** The campaign will work in the environment of the Cyber Security Act. The increasing cases of digital frauds require legal awareness as a vital part of the training.
- **Data Privacy:** Tracking of user information (e.g. mobile numbers IVR tracking) must be considered within the data privacy criteria, so as to have a UN neutral and trusted image.

Environmental:

- **Climate Resilience:** Climate change is very sensitive to rural target audiences (farmers). The campaign can also be connected to climate adaptation because digital literacy is becoming a must to receive weather forecasts and disaster alerts.

SWOT Analysis

This will be a review of the strengths and weaknesses of the proposed campaign intervention, opportunities, and threats.

INTERNAL FACTORS	EXTERNAL FACTORS
STRENGTHS (Internal)	OPPORTUNITIES (External)
1. Strategic Partnerships: Firm coalition with the UN agencies, Government (ICT Division, Ministry of Education) and NGOs (BRAC, BNNRC) will guarantee sharing of resources and credibility. 2. Available Infrastructure: The use of Union Digital Centers (UDCs) 13000+ reduces the expenses of set up and leverages trusted local hubs. 3. Personalized Content: The interventions such as Digital Maa Circles and IVR Tutorials are explicitly addressing the identified literacy and gender barriers in the research. 4. Trust Capital: UN brand has serious weight and impartiality in rural Bangladesh, which aids in overcoming the distrust of any information that comes outside.	1. Youth Mobilization: The large rural youth demographic is eager to learn; empowering them as Digital Ambassadors allows for rapid, viral scaling of skills within families. 2. Demand for E-Services: There is a genuine pull factor rural citizens <i>want</i> to learn digital skills to access social safety net payments, passports, and banking. 3. Community Radio Reach: Bangladesh's robust community radio network is an underutilized asset that can penetrate deep into media-dark areas where internet fails. 4. Private Sector Interest: Telecom operators (Grameenphone, Robi) have a vested commercial interest in increasing data usage, making them willing partners for CSR funding.
WEAKNESSES (Internal)	THREATS (External)
1. Limited Budget: A budget of BDT 50 Lakhs is relatively modest for a national-level behaviour change campaign, potentially limiting reach to specific pilot districts rather than full national coverage. 2. Short Timeline: One year is a short period to achieve Behaviour Change (which usually takes 3-5 years). The project risks achieving only Awareness" without lasting habit formation.	1. Deepening Digital Divide: If infrastructure (electricity/internet speed) does not improve, trained users may become frustrated and abandon digital tools entirely. 2. Sophistication of Scams: Online fraud and Deep Fakes are evolving faster than literacy efforts. Users might lose their savings to a scam despite basic training, damaging trust in the campaign.

INTERNAL FACTORS	EXTERNAL FACTORS
3. Reliance on Volunteers: Depending on unpaid or low-paid community volunteers/students for training quality carries a risk of high attrition or inconsistent delivery. 4. High-Touch Requirement: Teaching digital skills to illiterate populations requires intensive, face-to-face hand-holding, which is resource-heavy and hard to scale quickly.	3. Cultural Pushback: If the campaign is perceived as westernizing rural women too aggressively, conservative local leaders may block access to Digital Maa sessions. 4. Political Instability: Any potential civil unrest or strikes (Hartals) could disrupt field activities, roadshows, and internet connectivity.

Audience/ Stakeholder Analysis.

Audience Profile

We have segmented the rural population according to their exposure to technology and also their vulnerabilities in order to leave behind one-size-fits-all approach.

Primary Audiences

Segment	Demographics	Psychographics (Motivations & Barriers)
1. The Aspiring Rural Youth	• Age: 15–30 years • Occupation: Students, unemployed youth, young labourers. • Tech Status: Digital Natives but naive. High smartphone ownership, heavy social media use (TikTok, Facebook).	• Motivation: Social status, entertainment, and employment opportunities. They want to be seen as smart. • Barrier: Overconfidence. They often believe they can spot fake news but are emotionally susceptible to viral rumours and deep fakes.

Segment	Demographics	Psychographics (Motivations & Barriers)
2. The Digital Maa (Rural Women)	• Age: 25–45 years • Occupation: Housewives, home-based entrepreneurs. • Tech Status: Borrowed Access. Often rely on a husband's or son's device. Low confidence.	• Motivation: Family well-being. They will learn digital skills if it helps their children's education, family health, or savings (bKash). • Barrier: Fear of technology (I might break it) and patriarchal gatekeeping (husbands fearing online harassment).
3. Smallholder Farmers	• Age: 35–60 years • Occupation: Agriculture. • Tech Status: Utilitarian. Mostly feature phone users, transitioning to smartphones slowly.	• Motivation: Profit and survival. They care about weather forecasts, crop prices, and government subsidies. • Barrier: Complexity. If an app is hard to read or requires typing, they will abandon it immediately. Trust only local, human sources.

Secondary Audiences

Schoolteachers & Educators: The figures of authority. The community listens as long as they certify digital literacy. They are fundamental in targeting the youth.

Local Religious/Community Leaders: The moral gatekeepers. Their approval is essential to dispel opposition on the aspect of women participation in the digital world.

Union Parishad Members: The members of the administrative gatekeepers. They enable the logistics of the Union Digital Centers (UDCs).

Stakeholder Map (Influence vs. Interest)

To deal with the complex web of the partners, we have mapped them in the terms of their Power (the level of influence on the outcome of the project) and their Interest (degree of concern/involvement).

STAKEHOLDER ANALYSIS

POWER-INTEREST GRID

Quadrant	Stakeholders	Engagement Strategy
High Power, High Interest	• Govt (ICT Division, a2i, Ministry of Education): They set the policy and control the UDC infrastructure. • UN Agencies (UNDP, UNICEF): Provide funding, technical oversight, and global best practices. • Telecom Operators (Grameenphone, Robi): Their connectivity is the backbone; without them, the training fails.	Strategy: Weekly coordination meetings, joint press releases, and direct involvement in steering committees.
High Power, Low Interest	• BTRC (Regulatory Commission): They regulate SMS/IVR costs. They don't need daily updates but must approve the regulatory aspects.	Strategy: Engage them early to ensure cultural compliance and secure "blessings" to avoid friction later.

Quadrant	Stakeholders	Engagement Strategy
	• Local Religious Leaders: Can block access to women if they feel cultural norms are threatened.	
Low Power, High Interest	• NGOs (BRAC, BNNRC): They have the grassroots reach but rely on UN/Govt funding. • Community Radio Stations: Highly enthusiastic partners for dissemination. • Local Journalists: eager for content and training.	Strategy: Provide them with resources, training toolkits, and funding to execute the field activities.
Low Power, Low Interest	• General Urban Public: Not the target, but their support adds prestige. • International Media: Useful for global visibility but not critical for local success.	Strategy: Periodic newsletters and social media updates to maintain general goodwill.

Campaign Strategy:

The main strategic move of this campaign is to rebrand Digital Literacy as not a technical skill (coding/computing) but as a Life Skill (survival/safety). The campaign will not only position the mobile phone as a means of entertainment, but a medium of entry to vital rights- rural users will be empowered by being able to be more than mere consumers of content to be active citizens.

Key Message: we have organized them into the four strategic pillars to inform all the communication materials:

Pillar 1: The Verification Shield

Core Message: Verification is your digital seatbelt; one minute of checking facts before sharing can help keep your community safe.

Context Directly deals with the strategy of Think before you click and fact-check Bootcamps.

Pillar 2: Economic/Civic Utility

Core Message: Your phone is your office, your government office; getting digital will unlock faster healthcare, better prices on crops and safe banking.

Context: correlates with the UDC workshops educating farmers to make use of crop-price apps.

Pillar 3: Safety and Hygiene

Core Message Your word is as precious as your house key it'll save your family.

environment Promotes the tutorials of IVR on fiddle for entailment.

Pillar 4: Radical Inclusion

Core Message: There is no gender or age restriction in technology, a Digital Maa is a better protector of her family.

Context: This is specially created to de-stigmatize the use of technology by women in conservative rural families.

Theoretical Underpinnings

Our strategy is not arbitrary; it's deeply embedded in communication and operation propositions that insure efficacy.

1. Linking Environmental Scanning (PESTLE) to Hybrid Channel Strategy

- proposition Media uproariousness proposition suggests that complex dispatches bear rich channels (face- to- face), while simple dispatches can use spare channels (SMS).
- operation Our Environmental Scanning revealed a Technology Paradox grandly mobile power but low knowledge.
- Strategic Shift Because of this finding, we rejected an App-only approach. rather, we espoused a mongrel Strategy. We use Rich channels(UDC Workshops, Digital Maa Circles) for deep chops training and spare channels(Miking, IVR) for broad mindfulness. Without the scanning, we might have launched a digital-only crusade that would have failed due to the structure gaps linked.

2. Linking Stakeholder Engagement to The Networked Coalition

- proposition Stakeholder Theory (Freeman) emphasizes that an association must produce value for all stakeholders, not just shareholders.
- operation The Stakeholder Map showed that the UN cannot reach every Vill alone.

- **Strategic Shift** We employed a Coalition Model. By engaging Telcos (Corporate Sector) for connectivity and Union Parishads (Public Sector) for legality, we distribute the cost and threat. The Train the Coach model (training original preceptors Imams) relies on the Two-Step Flow of Communication Theory, which posits that information flows from media to Opinion Leaders and also to the wider population. pastoral citizens trust their original schoolteacher further than a distant UN functionary.

3. Linking Media Relations to Localized Narrative Construction

- **Theory:** Agenda Setting Theory suggests that the media tells people what to think about.
- **Application:**
 - **Strategic Shift:** Instead of relying solely on national TV (which might be ignored), we are using Community Radio Dramas. This uses Entertainment-Education (Edutainment) theory. By embedding the “safety” message into a drama featuring relatable rural characters, we bypass the audience’s resistance to “boring” educational content. The “Traditional Miking” tactic acknowledges the local media landscape where oral tradition still dominates over written text.

As the Media and Public Relations representative for the UN Agencies involved, I’ve structured this plan using the PESO Model (Paid, Earned, Shared, possessed). This ensures we maximize our limited budget (50 Lakhs BDT) by using community trust and being structure rather than counting solely on precious advertising.

Given the pastoral environment and low knowledge rates, this plan prioritizes high- tech digital advertisements and prioritizes audio-visual, face- to- face, and community- led channels. The strategy is High Touch, Low Tech using mortal connection to make digital confidence.

1. OWNED MEDIA

These are the assets and environments we create and manage directly. They are the core hubs of our campaign.

Tactic	Objective	Format	Frequency	Responsible Party
Digital Discovery Workshops at UDCs	To provide hands-on training for farmers and adults on e-services and safe internet usage.	Experiential Event: In-person interactive workshops at Union Digital Centers (UDCs).	Monthly (12 sessions per selected UDC over the year).	a2i (Access to Information) & Local UDC Entrepreneurs.

Tactic	Objective	Format	Frequency	Responsible Party
Fact-Check Bootcamps	To immunize youth against fake news through gamified learning.	Educational Event: Half-day training sessions in schools/colleges using quizzes and spot the fake games.	Quarterly (Aligned with school terms).	Ministry of Education & UN Youth Volunteers.
IVR Digital Help Desk (Toll-Free)	To provide accessible, on-demand answers for illiterate users who cannot read FAQs.	Audio Utility: A toll-free number offering pre-recorded audio guides (e.g., Press 1 to learn how to spot a scam).	24/7 Availability throughout the campaign.	Telco Partners (e.g., Grameenphone/Robi) & Tech Partner.
Campaign Collateral (Print)	To serve as visual reminders of key safety messages in high-traffic areas.	Visual: Pictorial posters and leaflets (low-text, high-visual) placed in UDCs, bazaars, and tea stalls.	One-time distribution with refreshers every 3 months.	UN Agencies & NGO Field Staff.

2. PAID MEDIA (Channels We Pay For)

Given the budget constraints, paid media is highly targeted to interrupt misinformation and drive attendance to our Owned events.

Tactic	Objective	Format	Frequency	Responsible Party
Community Radio Drama Series	To educate through entertainment (Edutainment) using relatable characters facing digital dilemmas.	Audio: 15-minute episodic drama followed by a Q&A segment.	Weekly (Airing on market days/peak listening hours).	BNNRC (Bangladesh NGOs Network for Radio and Communication).
Traditional Miking (Loudspeakers)	To reach the media dark population (those without TV/Internet) and announce upcoming workshops.	Audio: Rickshaw or auto-rickshaw announcements in local dialects moving through village bazaars.	2 days prior to any major local training event.	Local Union Parishad & Field Volunteers.
SMS Blasts	To deliver nudges regarding digital hygiene (e.g., Don't share your PIN with anyone).	Text/Bangla Script: Short, urgent safety tips sent directly to mobile phones.	Bi-weekly push notifications.	Telco Partners.
Local Cable TV Scrolls	To reach households with televisions during evening news/entertainment hours.	Visual/Text: Running ticker/scroll at the bottom of the screen with campaign slogan.	Daily during peak evening hours (6 PM - 9 PM).	Local Cable Operators.

3. SHARED MEDIA (Community Interaction)

This is where the community takes ownership. We provide the spark; they provide the fire. This is crucial for the Digital Maa and Youth segments.

Tactic	Objective	Format	Frequency	Responsible Party
Digital Maa Circles	To create a safe, peer-to-peer learning space for women to discuss digital parenting and safety.	Community Meeting: Courtyard meetings (uthan baithak) led by a local female "Digital Ambassador."	Bi-weekly (Afternoon sessions).	Partner NGOs (e.g., BRAC) & Local Women Leaders.
Youth Cyber Brigade Social Groups	To turn youth into active defenders against misinformation online.	SocialMedia: Facebook/WhatsApp groups where youth share verified info and report fake news.	Ongoing/Daily moderation.	UN Youth Volunteers & Student Leaders.
Tea Stall Adda Activations	To spark conversation among men/farmers in their natural gathering spots.	Informal Discussion: Trained volunteers join tea stall conversations to debunk myths casually.	Ad-hoc/Weekly (Evenings).	Local NGO Volunteers.

4. EARNED MEDIA (Publicity & Trust)

This is the credibility we gain through third parties—news outlets, influencers, and local leaders.

Tactic	Objective	Format	Frequency	Responsible Party
Press Briefings & Launch Event	To secure buy-in from national policy makers and legitimize the campaign.	News Coverage: Launch event with DC/UNO (District Commissioner) covered by local newspapers/TV.	At Campaign Launch and Closing Ceremony.	UN Communications Team.
Success Stories & Case Studies	To demonstrate impact to donors and the government.	Editorial/Feature: Stories of farmers saved from scams or women empowered, pitched to national dailies (e.g., Prothom Alo).	Quarterly features.	UN Media Officer / PR Team.

Campaign Duration 12 Months Phasing Strategy

- **Phase 1 Foundation (Months 1- 2):** Stakeholder alignment, content creation, and birth assessment.
- **Phase 2 Launch & Activation (Month 3):** High- visibility launch and original mass media rollout.
- **Phase 3 Deep Engagement (Months 4- 10):** The core period for shops, training, and community conditioning.
- **Phase 4 Review & Sustainability (Months 11- 12):** Impact evaluation, reporting, and handover to original communities.
